

zLinq puts your communications infrastructure to work for your business

zLinq provides multi-location enterprises with Communications Lifecycle Management, a solution designed to simplify buying, managing, and optimizing all voice and data assets.

Visualize Your Entire Communications Inventory

zLinq's Visualization Toolkit collects, analyzes, and decodes your infrastructure assets in real-time. This allows you to see your entire communications inventory in full context - providers, locations, costs, contracts, all the way down to individual circuit IDs.

Align All Teams and Stakeholders

zLinq provides integrated consulting and support for managing your communications. Through our telecom-specific professional services expertise and proprietary software, we help you align Finance, IT and Business Units around top business priorities, eliminating the gaps causing wasted time and effort.

Execute with Confidence

With zLinq, you will execute with purpose, as we manage the burden of change on your behalf. And our budget-neutral guarantee means that we share the risk with you, allowing you to own the success, not just the effort.

The zLinq Advantage

Visualize your environment in full context

Our Visualization Toolkit collects, analyzes, and decodes your infrastructure data in near-real time for IT audiences - so you can take decisive action

Align your people around top priorities so they collaborate, not compete

Integrated consulting & support that works for, and across, all impacted teams

Execute with purpose without having to take on all the work

A risk-sharing partner model that takes on the burden of change and guarantees results.

**Own the success,
not just the effort.**

Inventory & Audit

With zLinq's Inventory & Audit solution, you get a single source of truth for all your telecom assets. Our solution combines an in-depth audit of all telecom services with benchmarking across a deep customer database to identify areas for cost savings and opportunities to modernize your communications infrastructure.

Optimization

On average, enterprises overspend by 32% on voice and data services. Using our savings roadmap, zLinq helps you highlight "quick win" savings and implement strategic, high-level recommendations to maximize long-term savings.

Invoice Processing

Eliminate disconnects for non-payment, reduce costs, and streamline processes by consolidating invoices for Voice, Internet, and other communications services, allowing you to recover 45 hours/month or more spent on invoice processing and payments.

Lifecycle Management

zLinq's Lifecycle Management solution encompasses inventory and asset management, vendor management, and project management across the entire lifecycle of your communications assets and infrastructure. Clients realize a 171% return on investment throughout the lifetime of their contract.

Advisory Services

The zLinq Client Service team is staffed by telecom experts with over 10 years of experience each. They leverage best practices, playbooks, and deep vendor relationships to ensure you always make the best decisions for your business.
